

TW1.2 - Jira Project & Issue Tracking Report

Name: Jyoti kumari sah

PRN: 23070122278

class:cs B

Subject: DevOps Lab

Aim

To understand project management and issue tracking using Jira.

Objectives

Create a project, create epics and stories, assign tasks, manage workflow and monitor progress.

Theory

Jira is a project management and issue-tracking tool developed by Atlassian. It supports Agile methodologies including Scrum and Kanban. Teams can create issues, assign responsibilities, prioritize work, monitor sprint progress, and generate reports.

Software Requirements

Jira Cloud account, Web browser, Internet connection.

The screenshot displays the Jira Projects interface. On the left is a sidebar with navigation options: Project directory, Following, Status updates, Archived, Teams, and Goals. The main content area features a search bar, a '+ Create' button, and a banner with the text 'Use projects to keep everyone up to date with weekly status updates on any stream on work.' Below this is a 'Projects' section with tabs for 'All projects', 'My projects', and 'Archived'. A search bar for projects is present, along with filters for Tag, Status, Goal, Team, and Owner. A list of 23 projects is shown, with columns for Project, Status, Target date, Assignee, Extension, and Last updated. Annotations highlight specific features: 'Create filtered views to easily stay on top of the projects most important to you' points to the 'More views' dropdown; 'View your projects any way you want with timeline or list views and customizable columns' points to the view and column selection icons.

Project	Status	Target date	Assignee	Extension	Last updated
New employee onboarding update	On track				1 day ago

Create a Jira project, configure workflow, create backlog items, assign tasks, update status
